

FEVERED SLEEP – THE FOREST

BRIEF TECHNICAL SUMMARY FOR RECEIVING VENUES

The design for The Forest includes both performance and audience spaces; Fevered Sleep tours the set and specifically designed seating.

The Forest requires a minimum, un-raked playing space of 10m x 11m, and a minimum grid height of 4.5m. This area will contain the performance space and the audience seating but fire exits should be allowed for outside of this. A full lighting grid/flying bars are required over the entire space.

The Forest will play in traverse with a raised central stage running the length of the longer axis of the space. Either side of this stage will be two rows of seating. A number of tree trunks will grow out of the stage; these will also need rigging points above. Various other set element will be suspended from rigging points in the grid, whilst most of these will not have a high load the rigging points are likely to be very specific.

The performance will have a full lighting design likely to run to a minimum of 36 dimmers. There will be some AV element for which will require the use of a venue projector.

The Forest will need a 6 session fit up, this will be run by Fevered Sleep's production manager supported by the technical stage manager (re-lights), company stage manager, and venue staff. The stage management team will run the show, TSM operating lighting and sound and the CSM running the stage.

The production will tour in a 7 1/2 ton truck with driver.

The show has two performers who will need clean warm dressing rooms and access to a shower.

The company will need to use venue laundry facilities.

As The Forest is currently in the design process these details cannot at this stage be more specific, however if you do require more information please do contact Ali Beale, details below.
